

## Internet Technology

This core competence handles our information technology services, which focus around the conception of Internet-based communication solutions.

These services comprise:

### **Enterprise Portals**

This service requires designs and applications of highly dynamic and interactive functional logic as, for example, business portals, media and press web sites, CRM systems. [Learn more](#)

### **Communities**

This service is directed toward highly frequented web portals with hundreds of thousands of users and monthly page accesses well in excess of hundred million views. The service portfolio extends to the use of specifically targeted communication concepts on brand portals as an instrument of customer retention. [Mehr erfahren](#)

### **CMS Implementation**

For Internet presences requiring constant updating, for example press or news portals, we specialize on developing a custom CMS (content management system) or build on existing systems together with our partners. [Mehr erfahren](#)
